

I actually did write the code for CNN for creating/training a model and as I was about to train the model, I realized that I had trouble downloading TensorFlow and also that my image dataset is too big for the program to be run locally. I'm trying to upload all my data (roughly 4000 images in total) in google drive and then on google colab, due to the # of images, it's been taking a long time. I'm honestly not trying to delay the submission and will upload the deliverable as soon as I can, but I'm sorry for the delay.
